

1) Load

There are hand pallet trucks with special fork lengths and/or widths for moving smaller or larger pallets. For example, see the **Eurolifter range of hand pallet trucks!** The standard capacity for a hand pallet truck is 2 to 2.5 tonnes. We can supply trucks with a capacity of upto **3 tonnes.**

The better the pallet truck is geared to the operating situation, the easier the job!

2) Operating space

The smaller the space, the more important the versatility! We mainly recommend short hand pallet trucks from Eurolifter, Pramac Lifter and Bulli for use in small spaces

3) Operating environment

There are galvanized and stainless steel hand pallet trucks for use in humid environments or in contact with chemical products (e.g. detergents)

4) Operating height

Scissor hand pallet trucks (manual or electric) lift loads to an ergonomic operating height for loading and unloading

5) Special models

We also supply hand pallet trucks with a built-in weighing system, four-way and all-terrain hand pallet trucks.

6) How do I choose the right wheel?

Rubber steering wheel:
soft and silent

Polyurethane steering wheels and fork wheels:
hard wearing, soft, ideal for any floor

Get the best out of your pallet truck!

Nylon steering wheels and fork wheels:
better, ideal for smooth floors and lightweight loads

Tandem fork wheels:
greater stability, less wear on floors and wheels

Single fork wheels:
better for lightweight loads
